

Yuhalu Hmong Text To Speech

Update Instructions

Downloads

Download the files that need to update, and these include:

1. Yuhalu Hmong text to speech software;
2. All the voices;
3. Any new lessons and catalogs;
4. Others;
5. Oracle Java JRE (Java Runtime Environment) software

Update

These files are zipped so they need unzipped to Yuhalu folder, except Oracle Java JRE.

On Windows 7, I use 7-zip. These instructions are based on Windows 7, and disk drive C.

1. Open window explorer, locate the downloaded file, then copy to Yuhalu folder.
2. Click on the zipped file in Yuhalu folder to select from window explorer.
3. Right click to show a popup window with 7-zip and position the mouse to this. There is another popup window on its right.
4. Click Extract Here to show the Confirm File Replace window, then click the Yes to All button to extract the zipped file.

Warning: Please back up your files each time before updating; otherwise, they will be overwritten.
